Talent Acquisition Team
Globe Telecom, Inc.
The Globe Tower, Bonifacio Global City, Taguig City

Dear Hiring Manager,

I am a Bachelor of Science in Computer Engineering student at STI College – Calamba, and I am writing to apply for the On-the-Job Training Program at Globe Telecom. As a leading telecommunications company, Globe keeps millions of Filipinos connected, and I want to learn how that network is built and maintained. The program's year-round, project-driven training for technical students is the hands-on start I am looking for in my engineering career.

During my studies, I built an Arduino-based compost monitoring system on an Arduino Mega 2560 that controls an aerobic tumbler and an anaerobic mixer. I drove each chamber with a stepper motor through a DM556 driver and set up its 24 V power system using LM2596 buck converters. Building it taught me to plan power systems, wire and test hardware, and troubleshoot until everything runs reliably — skills I can apply to network equipment and field work. I also write and debug x86 assembly programs in Emu8086 and am familiar with Python and Java.

Beyond the classroom, I have worked as an encoder at Wow BESU Mamatid and at Cabuyao Medical Clinic and Pharmacy, where I completed 80 hours of OJT, kept department records, and manned the front information desk assisting walk-in clients. These roles taught me accuracy and how to serve customers well, which matters at a company as customer-focused as Globe. I am also a certified Safety Officer 2, so I understand the safety standards that technical and field teams follow, and I hold an associate-level skill in Solid Edge CAD.

I would be grateful for the chance to learn from Globe's engineers and contribute to your network and technical teams. Thank you for considering my application. I would welcome the opportunity to discuss how I can support Globe Telecom through your On-the-Job Training Program.

Sincerely,
Kurt Vincent R. Lansang
